(CSN12601)

Lab Assignment – 2

S. N.	Questions
1.	Create a Python list and write a program to demonstrate the use of the following list methods and functions: a) insert() b) remove() c) append() d) len() e) pop() f) clear() The program should clearly show the effect of each operation on the list using appropriate print statements and comments.
2.	Write a Python function that accepts two lists as input and returns True if the lists are equal in content and order; otherwise, it returns False. The function should handle edge cases such as empty lists and differing list lengths.
3.	Create a Python tuple and write a program to demonstrate the following operations: a) Add items to a tuple (by creating a new tuple, since tuples are immutable). b) Determine the number of elements. c) Check for the presence of an item in the tuple. d) Access tuple elements using indexing and slicing. The program should clearly illustrate each operation with suitable examples and output
4.	Write a Python program that stores student names and their percentage marks in a dictionary. The program should allow user input, store the data in key-value pairs, and then display the stored information clearly on the screen in a readable format.
5.	Write a Python program to identify and print all duplicate elements present in a list.
