

- 1) Write a program to check whether a number is positive, negative, or zero.
- 2) Write a program to check whether a number is even or odd.
- 3) Write a program to find the largest of three numbers.
- 4) Write a program to make a simple calculator (+, -, ×, ÷) using user choice.
- 5) Write a program to input a month number (1–12) and print month name and days.
- 6) Write a program to input marks and print grade (A/B/C/D/F) using if–elif–else.
- 7) Write a Python program that takes username and password as input and prints: (nested if)

"Login successful" if username is "admin" and password is "1234",

"Wrong password" if username is "admin" but password is not "1234",

"Wrong username" if username is not "admin".

- 8) Write a Python program to calculate discount and net payable amount based on the purchase amount:

If amount < 1000 → discount = 5%

Else if amount < 5000 → discount = 10%

Else → discount = 15%

- 9) Write a Python program to input marks and print “Pass” if marks are 40 or above, otherwise print “Fail”, using the ternary operator.
- 10) Write a Python program using nested while loops to print the multiplication tables from 3 to 5
- 11) Write a Python program to check whether a given number is a palindrome or not using a while loop.
- 12) Write a Python program using a for loop to print the square of all odd numbers from 1 to 7.
- 13) Write a Python program using a for loop to print all even numbers between 1 and 100 (inclusive).
- 14) Write a Python program to print a number pyramid pattern using a for loop.

1

12

123

1234

12345

- 15) Write a Python program to print a string in a pattern where it first prints increasing prefixes of the string and then decreasing prefixes.
